

# Spring

Longer and warmer days have been welcomed. Our kindergarten gardens have burst into life and we have been very busy planting many seeds. Growing seeds is an excellent way to learn about the life cycles of plants and how to nurture and grow these. Especially exciting is growing herbs and vegetables so we can enjoy cooking and eating these at kindergarten.

Borage and pansy flowers have provided inspiration to bake beautiful shortbread decorated with these lovely spring flowers. We have also revisited growing wheat and enjoyed creating many different flavoured wheat grass smoothies.

Summer is just around the corner and we are looking forward to a bounty of fruit, vegetables and sunflowers.
